

**Vesicular Stomatitis 2010  
Situation Report – June 1, 2010**

**Cleared for Distribution**

**New Information**

On May 26, 2010, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa, confirmed the finding of vesicular stomatitis New Jersey serotype in three horses on a single premises in Cochise County, Arizona. The affected horses had clinical signs and a four-fold increase in CF titer on paired sera collected 7 days apart. Two other horses and five cattle on the premises show no clinical signs of disease. The premises is currently under state quarantine. This is the index case of VSV-NJ for the United States in 2010.

**Map Information**

See adjoining map for cumulative positive premises information.

Counties with current positive premises:

STATE	COUNTY	PREMISES
Arizona	Cochise	1
<b>TOTAL</b>	<b>1</b>	<b>1</b>
